

Acrylic Engraved (K-Graved)

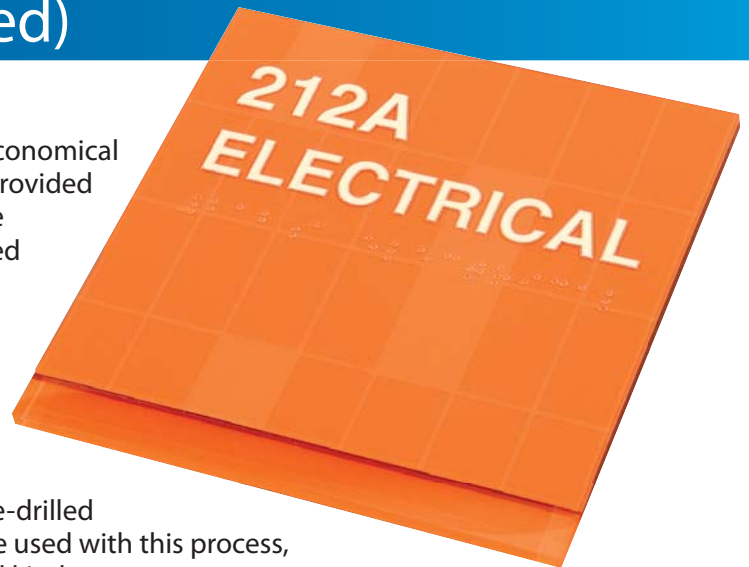

About our K-Graved Engraving Process

Kennyetto's **K-Graved** Series engraved signs provide an economical solution to your ADA signage needs. These signs can be provided in 1/16" through 1/4" thicknesses. Letters and graphics are raised 1/32" from the sign face using a computer controlled engraving process. All Braille is domed and embedded directly into the sign surface using the patented Raster® Braille process.

The **K-Graved** Series is our most economical custom ADA sign series, and an excellent choice for achieving custom ADA compliance at an affordable price.

Custom shapes are available, as are radius corners and pre-drilled holes for screw mounting. Many different materials can be used with this process, including modified acrylic, cast acrylic and laminates of all kinds.

The acrylic plate is colorfast and UV stabilized, keeping your signs looking new for years to come. Custom colors are available using back painted material. K-Graved Series signs are suitable for interior or exterior use.

Acrylic Inlaid (K-Welded)

About our K-Welded Inlaid Process

Kennyetto's **K-Welded** Series of inlaid acrylic signs are similar to our engraved acrylic signs except all letters and graphics are cut from 1/16" material and embedded 1/32" into the surface of the sign face. This added process offers additional vandal resistance to our acrylic engraved products. Grade 2 domed Raster Braille is then embedded in the sign surface.

All of our **K-Welded** Series inlaid signs utilize our computer controlled rotary and laser engravers. These signs are available in custom back painted colors as well as all standard Rowmark® colors.
